

## EcoScreen® Sustainable High Performance Sun Control Fabric Collection

SunProject™ is pleased to announce its second generation of sustainable Eco-Friendly Fabrics. As an industry innovator in Roller Shading Systems and Lite-Lift® operating systems SunProject™ is taken the lead in providing a complete program of Sustainable Eco-Friendly fabrics which combine healthy, superior performance without compromising the environment.

The EcoScreen® comes in five different densities:

- The **ES-8500P** (Privacy Weave) is a unique dense privacy feature that filters light but provides privacy.
- The **ES-8600** (O.F. 5%) provides optimum solar protection while providing a view to the outside.
- The **ES-8400M** (O.F. 4%) with highly reflective metalized backing is designed specifically to reduce solar heat gain and control light. Due to its specially coated exterior side, the fabric reflects up to 45% solar heat and blocks over 90% UV rays.
- The **EB-700** (Blackout) has unique decorative colours and the look and feel of an elegant rich fabric.
- The **EB-200** (Blackout) maintains high quality at an economical price. It is presented in a classic range of neutral colours and a unique PVC-free coated polyester composition.

The EcoScreen® fabric is produced from a special FR polyester PES compound which has an extremely strong tensile strength as well as a very appealing look and feel.

Other features:

- Low VOC's
- NO PVC
- Provides improved personal comfort
- Non-Allergenic
- All fabric series are available in 9 matching colors.
- Extra wide width fabric: 128" (no seaming).
- A special thin yarn construction allows for a small roll up diameter allowing you to use longer and wider shades with smaller head boxes and cassettes.
